Task Sheet No. 5:
DAILY LESSON LOG

INSTRUCTION:

As a pre-service teacher, you are tasked to develop a **Daily Lesson Log (DLL)** based on the prescribed curriculum (ILAW Framework) and identified Most Essential Learning Competencies (MELCs) or Budget of Work (BoW). Using the provided DLL format and the available learning resources, prepare a complete and coherent lesson log (5 sessions) that demonstrates alignment among the learning competencies and standards, learning objectives, content, learning activities/strategies, instructional materials, assessment, and learning opportunities. Your DLL should reflect appropriate teaching strategies, learner-centered activities, and realistic time allotments that respond to the needs and context of the intended learners. Your completed DLL will serve as a professional teaching document that may be used by your cooperating teacher to review the appropriateness and effectiveness of your planned lesson.

RUBRIC FOR GRADING:

CRITERIA	EXCELLENT	PROFICIENT	DEVELOPING	BEGINNING
Intensions **(20%)**	Intentions are clearly and appropriately stated, with relevant learning competencies accurately articulated. Strong coherence and alignment are evident across all sections of the DLL.	Intentions are clearly stated, with appropriate learning competencies articulated. Coherence and alignment are evident across most sections of the DLL, with only minor inconsistencies. ✓	Intentions are partially stated, and the learning competencies are somewhat appropriate but may require clarification. There are inconsistencies across several sections.	Intentions are unclear, incomplete, or inappropriate, and the learning competencies are not articulated. Little or no alignment is evident across the sections of the DLL.
Learning Experience Design **(20%)**	The learning experience is clear, detailed, and logically sequenced. Another teacher can implement the lesson independently without additional explanation. Learning design principles are intentionally and consistently embedded throughout the lesson.	The learning experience is clear and logically organized. Another teacher can implement the lesson with minimal clarification. Learning design principles are appropriately embedded in most parts of the lesson. ✓	The learning experience is partially clear or inconsistently organized. Another teacher may require additional explanation to implement some parts. Learning design principles are partially evident.	The learning experience is unclear, incomplete, or poorly organized. Another teacher would require substantial explanation to implement the lesson. Learning design principles are not evident or appropriately embedded.
Learning Experience for Opportunities and Inclusivity **(20%)**	The learning experience maximizes available opportunities for integration and contextualization.	The learning experience provides appropriate opportunities for integration and	The learning experience demonstrates limited integration and contextualization.	The learning experience shows little or no integration or contextualization. Learners with

	Activities are highly relevant to learners' experiences and are inclusive and responsive to learners with disabilities, barriers, and diverse or unique contexts.	contextualization. Activities consider learners' needs and are generally inclusive and supportive of learners with disabilities, barriers, and diverse contexts. ✓	Some learner differences and barriers are considered, but support and inclusive strategies are inconsistent or incomplete.	disabilities, barriers, and unique contexts are not adequately considered.
Assessment Strategies (20%)	Assessment strategies are intentionally integrated throughout the session and effectively monitor learners' progression. They generate clear and sufficient evidence of whether learning outcomes have been achieved and inform subsequent teaching decisions. ✓	Assessment strategies are integrated at appropriate points in the session and provide evidence of learners' progress and achievement. The results generally support instructional decisions.	Assessment strategies are present but inconsistently integrated. They provide limited evidence of learners' progression or achievement and only partially inform instructional decisions.	Assessment strategies are limited, inappropriate, or disconnected from the learning experience. They provide little or no evidence of learners' progress or achievement.
Ways Forward and Interventions (20%)	Ways forward and interventions are specific, practical, and actionable, clearly indicating how learning will be extended, enriched, or adjusted based on learner performance and reflection. ✓	Ways forward and interventions are appropriate and actionable, providing reasonable adjustments or extensions based on learner performance and reflection.	Ways forward and interventions are general or partially actionable. Connections to learner performance and reflection are limited.	Ways forward and interventions are unclear, impractical, or absent, with little evidence that learner performance or reflection informs subsequent learning.

Task Sheet No. 5
DAILY LESSON LOG

Lesson Title	**Session 1: Conducting the Mid-of-Year Rapid Mathematics Assessment (RMA MOSY)** **Session 2: Digital Drawing Techniques** **Session 3: Mastering Digital Illustration** **Session 4: Shading Techniques, Textures, and the Rule of Thirds in Visual Arts** **Session 5: Summative Assessment**
Learning Area/s	• **Mathematics / Guidance & Assessment** • **Visual Arts (TLE ICT 10-TERM 2)** • **TLE 10/ICT (TERM 2)**
Name of Student Teacher/s	Jade Lormie T. Porras
Name of Cooperating Teacher	Shella Marie B. Bongalbal
Grade Level and Section	**Grade 10** – Section: Cebu, Batanes, Romblon, Basilan, Bohol
No. of Sessions	5 sessions; 45 minutes per session

Declaration of AI use *Cite how AI was used in the formulation of the lesson plan. See DO 3, s. 2026, Annex A*	Artificial Intelligence (AI) used as assistance in drafting and as an organizational tool. The teacher reviewed, validated, and modified the content to ensure its accuracy, alignment with the DepEd MATATAG Curriculum, and suitability for the learners' needs before implementation.

Intentions	Meaningful learning experiences are anchored in how we frame them. Start by deciding what you want learners to master by the end of the lesson – keep it clear and simple. Remember: Understanding your learner's evolving context and designing around it ensure that your lessons connect with and are relevant to them.
Learning Competency and Curriculum Standards: *Write the competency/ies from the curriculum that we are targeting, and the content or performance*	**MATHEMATICS / GUIDANCE & ASSESSMENT (Session 1)** **Content Standard:** The learners demonstrate an understanding of key concepts in algebra, geometry, statistics, and problem-solving to evaluate mid-year foundational numeracy and mathematical competencies. **Performance Standard:** The learners independently apply appropriate mathematical operations, reasoning, and problem-solving strategies to accurately complete diagnostic assessment items.

standards applicable to the sessions	**Learning Competencies:** • Demonstrate foundational mathematical proficiency across key topic areas (algebraic expressions, geometry, data interpretation, and numerical operations). • Follow standardized test procedures, demonstrating focus, academic integrity, and self-monitoring during national diagnostic assessments. **VISUAL ARTS / VISUAL GRAPHICS (Sessions 2–4)** **Content Standard:** The learners demonstrate an understanding of: • **Session 2:** key concepts, tools, principles, and techniques in digital drawing, raster graphics manipulation, and visual enhancements using graphics software. • **Session 3:** key concepts, tools, principles, and techniques in digital drawing, raster graphics manipulation, layer hierarchy, and visual enhancements using graphics software. • **Session 4:** the elements and principles of design, types of illustrations, drawing enhancement techniques, proportion, expression, and movements as applied in drawing the human face. **Performance Standard:** The learners: • **Session 2:** independently apply appropriate digital drawing tools, brush settings, layer properties, shading techniques, and texturing methods to produce enhanced digital illustrations. • **Session 3:** independently apply appropriate digital drawing tools, brush settings, layer properties, color blending, and shading techniques to produce enhanced digital illustrations. • **Session 4:** apply the design principles and techniques in creating vectorized drawing and simple animated video clips. **Learning Competencies:** • **Session 2:** (1) Identify and utilize digital drawing tools, brush dynamics, and layer options in Ibis Paint X or equivalent software. (2) Apply digital shading, highlights, and rendering techniques (soft shading, cell shading, smudging, opacity control) to convey 3D form and depth. (3) Apply digital textures and blending modes (e.g., Multiply, Overlay, Add/Linear Dodge) to enhance drawing quality and tactile realism. • **Session 3:** (1) Identify and utilize digital drawing tools, brush dynamics, and layer options in Ibis Paint X or equivalent software. (2) Apply digital shading, highlights, and rendering techniques (soft shading, cell shading, ambient occlusion, color blending) to convey three-dimensional form and depth. (3) Utilize non-destructive layer properties including Clipping Masks and Blending Modes (e.g., Multiply, Add/Glow, Soft Light) to enhance digital artwork precision. • **Session 4:** Apply drawing enhancement techniques.

TLE 10 – ICT / COMPUTER SYSTEMS SERVICING (Session 5)

Content Standard: The learners demonstrate an understanding of the concepts, underlying principles, and competencies in Computer Systems Servicing (CSS).

Performance Standard: The learners independently demonstrate the knowledge, skills, and attitudes required in Computer Systems Servicing.

Learning Competency:

• Apply the knowledge and skills acquired in the introductory Computer Systems Servicing lessons through a summative assessment.

	Session 1	Session 2	Session 3	Session 4	Session 5
Learning Objectives: *Write the smaller knowledge, skills, or tasks from the competency that the learners will work on and be able to show by the end of the sessions.*	At the end of the session, learners are expected to: **Knowledge:** Comprehend the standardized instructions for the Mid-of-Year Rapid Mathematics Assessment (RMA MOSY). **Skill:** Complete the diagnostic assessment items on grade-level math competencies within the given time. **Attitude:** Practice honest self-assessment	At the end of the session, learners are expected to: **Knowledge:** Analyze the functions and settings of the core Ibis Paint X tools (brushes, airbrush, smudge, clipping mask, and blending modes) to select the right technique for shading, texturing, and realistic 3D enhancement. **Skill:** Apply the shading and texturing steps (base color, clipped Multiply shadow, texture, and Add/Glow	At the end of the session, learners are expected to: **Knowledge:** Analyze and select the appropriate Ibis Paint X tools (Blur, Smudge, Airbrush, Dip Pen) and layer features (Clipping Mask, Blending Modes) needed to render depth and shadow in a digital drawing activity. **Skill:** Apply the full workflow (base layer, clipped Multiply layer for shadows, color blending, clipped Add/Glow layer for	At the end of the session, learners are expected to: **Knowledge:** Identify and explain five shading techniques (Hatching, Cross-hatching, Stippling, Blending, Scribbling), three texture styles (Smooth, Rough, Furry), and the 3 × 3 grid of the Rule of Thirds. **Skill:** Execute a practice artwork that uses selected shading techniques, surface textures, and a Rule of Thirds layout.	At the end of the session, learners are expected to: **Knowledge:** Demonstrate understanding of the concepts and skills learned in the introductory CSS lessons, including hardware, software, OHS, and tool classification. **Skill:** Complete the summative assessment independently and honestly while following the written instructions accurately.

	and manage test anxiety during the assessment.	highlight) on a simple object. **Attitude:** Show patience and persistence in learning a new digital interface, and honesty in creating original work.	highlights) on a line-art worksheet. **Attitude:** Show patience and persistence when fixing technical errors, and respect for original digital creations.	**Attitude:** Appreciate the role of visual balance, light, and tactile details in artistic expression.	**Attitude:** Observe proper testing etiquette and classroom discipline during the assessment.
Learner Context: *Write your observations of your learners, and how they have been performing or responding to learning experiences recently. Include strengths, interests, and possible barriers to learning.*	**Session 1:** Grade 10 learners differ in math skills. Some are strong in procedures, while others struggle with word problems and multi-step items. Most are used to diagnostic tests, but test anxiety and reading comprehension gaps can affect their performance. Clear oral instructions and a visual timer help them stay focused and calm. **Session 2:** Learners differ in digital literacy and drawing experience. Many are used to touch devices and social media graphics, but some may find it hard to move from traditional drawing to layers and brush pressure. Screen-mirrored step-by-step demos, hands-on practice, and peer help build their confidence. **Session 3:** Most learners are comfortable with touch screens, but moving from flat coloring to digital layers, color theory, and light direction can be challenging. Live teacher demos, step-by-step screen mirroring, guided exercises, and peer modeling lower their anxiety with new software tools. **Session 4:** Learners have different levels of art experience, both traditional and digital. Many can draw basic shapes, but controlling light values, stroke textures, and off-center composition needs step-by-step modeling and clear visual guides. Interactive demos and guided practice build their confidence. **Session 5:** Learners have just finished the introductory lessons on Computer Systems Servicing (CSS). This summative test checks how well they mastered the competencies covered in the unit.				

Learning Experience	Learning experience is like a thoughtfully designed journey. Each activity and intersection builds towards meaningful understanding and growth. Identify activities and interactions to help learners gain knowledge, skills, or understanding in a purposeful and coherent way.				
Pre-Lesson: *Describe how you will help the learner get ready for the lesson.*	**Drill / Mindful Orientation: Context Reading (3 min)** Learners read the passage, then answer the quick check questions. **"What is RMA MOSY?"** The Mid-of-Year Rapid Mathematics Assessment (RMA MOSY) is a diagnostic tool designed by the Department of Education to gauge your current understanding of mathematical concepts midway through the school year.	**Context Reading (4 min)** Learners read the passage, then answer the quick check questions. **"Why Go Digital with Shading and Texture?"** In traditional art, achieving smooth gradients or complex textures requires layering graphite, ink, or paint, which can be time-consuming and permanent. Digital art software like Ibis Paint X changes this using Non-Destructive Editing. Features such as digital Layers, Clipping Masks, and Blending Modes allow artists to experiment freely with light,	**Context Reading (4 min)** Learners read the passage, then answer the quick check questions. **"The Magic of Digital Depth: Blending, Clipping, and Shadows"** In traditional art, drawing a shadow over a base color can easily ruin the artwork if you make a mistake. In digital art with Ibis Paint X, we use Non-Destructive Editing. By creating a Clipping	**Context Reading (4 min)** Learners read the passage, then answer the quick check questions. **"Bringing Art to Life: Light, Texture, and Composition"** A flat drawing becomes a convincing 3D visual through three major elements: Value (Shading), Surface Quality (Texture), and Arrangement (Composition). Shading techniques like hatching, stippling, or	**Mindset Conditioning (2 min)** Teacher leads a short "Brain Dump." Learners write down any CSS terms or safety rules they remember. **Atmosphere Setting (3 min)** Desks are cleared of everything except a pen. Teacher explains that the summative test is a chance to show what the learners have learned.

	Unlike a final exam, the RMA MOSY is not used to grade or judge you. Instead, it acts as a "health check" for your math skills. Your honest responses help your teacher identify which topics you have mastered and which ones need more focus and support in the coming months. **Quick Check Questions** 1. What is the primary purpose of taking the RMA MOSY? 2. Will this assessment lower your quarterly grade if you miss an item? Why or why not? 3. How do your answers help your teacher plan future math lessons? **Answer Key** 1. To check your current understanding of math concepts	shadows, and surface textures without destroying the original line art. Mastering these tools turns flat drawings into compelling, 3D-like digital artwork. **Quick Check Questions** 1. What is the advantage of applying shading on a separate layer rather than directly on the line art layer? 2. How do blending modes like Multiply and Overlay help in digital rendering? 3. What tool in Ibis Paint can restrict shading strictly within the boundaries of a shape? **Answer Key** 1. You can experiment with light and shadow without destroying the original line art. 2. Multiply darkens base colors naturally for shadows; Overlay boosts contrast and adds mid-tone texture. 3. Clipping Mask	Mask, your shading stays perfectly inside the lines without spilling over. Combined with Color Blending (mixing light and shadow seamlessly) and Blending Modes like "Multiply," you can transform flat 2D shapes into vibrant 3D objects with depth and realism. **Quick Check Questions** 1. What happens when you apply a Clipping Mask to a shading layer above a base color layer? 2. Which Ibis Paint tool or brush helps blend two colors together smoothly? 3. Why is a dedicated layer set to Multiply better for shadows than solid black paint directly on your base color? **Answer Key**	blending create light and shadow. Texture styles like smooth, rough, or furry give objects a tactile, realistic feel. Finally, placing key subjects off-center using the Rule of Thirds makes the picture balanced, engaging, and visually dynamic. **Quick Check Questions** 1. What is the difference between Hatching and Cross-hatching? 2. How do you create a "Rough" texture compared to a "Smooth" texture? 3. Where should the main subject be placed according to the Rule of Thirds? **Answer Key** 1. Hatching uses parallel lines in one direction; Cross-hatching uses	

	midway through the year (a "health check"). 2. No. It is a diagnostic tool and is not used to grade or judge learners. 3. It shows the teacher which topics are mastered and which need more focus and support. **Review and Environmental Check (2 min)** Teacher makes sure desks are cleared, keeping only pencils, erasers, and scratch paper. **Teacher prompt:** "Remember, this assessment shows us where you stand so we can support you better. Take a deep breath, read each prompt carefully, and show your true work." **Motivation and Setting Expectations (3 min)**	**Review and Device Setup (3 min)** Teacher checks that devices are charged, Ibis Paint X is open, and tables are arranged for safe device handling. **Teacher prompt:** "Make sure your devices are ready and your workspace is set. Digital drawing takes precision and patience. Let's see how light and texture turn simple lines into realistic art." **Motivation and Objectives (3 min)** Teacher shows two images on the Smart TV. **Image A:** flat, unshaded digital sphere or character line art. **Image B:** the fully rendered version with soft airbrushing, cell-shading highlights, ambient occlusion, and texture. **Guide question:** "What differences do you notice between the two images, and which tools in Ibis Paint do you think created these effects?" Teacher then presents the objectives.	1. The shading stays inside the shape of the base color and does not spill over. 2. Blur tool, Smudge tool, or Airbrush 3. The Multiply layer gives natural-looking shadows, and it can be edited or fixed without ruining the base color. **Review and Workspace Setup (3 min)** Teacher checks device battery levels, opens Ibis Paint X on the learners' devices, and checks that stylus or finger input responds well. **Teacher prompt:** "Let's prepare our digital canvases. Digital art is built layer by layer. Let's see how light, shadow, and clipping masks work together today!" **Motivation and Objectives (3 min)**	overlapping layers of lines in different directions. 2. Rough texture uses uneven surfaces with short strokes and varied pressure; Smooth texture uses even, gradual shading without bumps. 3. Near one of the four intersection points where the grid lines meet, not dead-center. **Review and Setup (2 min)** Teacher checks that drawing materials or digital tablets are ready and displays the visual guides on the Smart TV. **Motivation and Objectives (3 min)** Teacher shows two artworks. **Image A:** a centered, flatly shaded drawing with no texture depth. **Image B:** a drawing that follows the	

	Teacher displays the test structure on the Smart TV: time limit, answer sheet layout, and guidelines.		Teacher shows two images on the Smart TV. **Image A:** a flat, 2D colored circle with no shadows or highlights. **Image B:** a 3D-rendered sphere with soft ambient shadows, crisp cast shadows, blended mid-tones, and specular highlights. **Guide question:** "Look at Image B. What techniques make this sphere look 3D instead of flat like Image A?" Teacher then presents the objectives.	Rule of Thirds, with stippled or blended shading and detailed rough or furry textures. **Guide question:** "Why does Image B feel more realistic and visually interesting to look at?" Teacher then presents the objectives.	
Lesson Flow: *Describe the activities that you can implement in 1 or more session to meet your intentions.* Apply the Learning Design Principles, use the prompts below as a guide. Note, not all principles are expected in every lesson. • *Make the objectives clear for the learners*	**1. Standardized Orientation and Material Distribution (3 min)** • Teacher gives out the official RMA MOSY answer sheets and test booklets. • Teacher reviews the standard instructions: filling in learner details (Name, LRN, Section), shading or	**1. Direct Instruction and Visual Demonstration (8 min)** Teacher mirrors the screen and demonstrates the core tools in Ibis Paint X: • **Brushes:** Dip Pen (Hard) for line art and cell shading; Airbrush (Trapezoid/Soft) for soft gradients; texture/pattern brushes. • **Layer order:** Base Color, Shading, Highlight, Texture.	**1. Direct Instruction and Live Screen Mirroring (8 min)** Teacher models the core techniques live on the Smart TV or projector: • **Layer hierarchy and base coloring:** fill flat base colors on Layer 1 using the Bucket Tool. • **Clipping Mask:** add Layer 2 directly above	**1. Direct Instruction and Visual Demonstration (7 min)** **Part 1: Shading techniques** • **Hatching:** parallel lines in one direction; closer lines make darker areas. • **Cross-hatching:** layered lines in different directions.	**1. Assessment Orientation (5 min)** Teacher discusses: • Purpose of the summative assessment • Test directions • Number of items and time allotment (as stated in the test paper) • Scoring system

• *Guide learners before letting them try the task on their own* • *Check the state of the learners' well-being, understanding, and mastery over the lesson* • *Connect today's new concepts to past competencies* • *Encourage collaboration among learners* • *Invite learners to reflect on why this matter to them* • *Ensure inclusion for learners' varied abilities, learning styles, and contexts*	writing answers, and using scratch paper. **2. Individual Test: RMA MOSY Administration (25 min)** • Learners answer the RMA MOSY items independently. • Teacher walks around to make sure standard testing conditions are followed. Only general instructions are clarified (no hints), and the room stays calm. • A visual timer on the Smart TV helps learners keep pace. **3. Post-Test Collection and Brief Reflection (4 min)** • Teacher collects the answer sheets and test booklets and arranges them. • **Valuing:** "Every problem you attempted today gives us valuable insights	• **Clipping Mask:** keeps shading and texture inside the base color below. • **Blending modes:** Multiply darkens base colors naturally for shadows; Overlay / Soft Light adds contrast and mid-tone texture; Add (Glow) / Screen makes light sources, rim light, and highlights. • **Filters:** Blur, Gaussian Blur, Noise, and Adjust Color (Hue/Saturation/Brightness). **2. Guided Hands-On Practice (12 min)** Teacher shares a sample line-art file (a simple sphere or object outline). Learners follow step by step, and the teacher checks that everyone is on the same step before moving on. **Step 1:** Fill the shape with a flat base color using the Bucket Tool. **Step 2:** Add a new layer above the base color and turn on Clipping Mask. **Step 3:** Set the clipped layer to Multiply and pick a cool	Layer 1 and turn on Clipping Mask. Brush strokes now stay inside Layer 1. • **Color blending and transitions:** smooth transitions with the Airbrush (Soft/Trapezoid); mix mid-tones with the Blur and Smudge tools. • **Shadow (Multiply and ambient occlusion):** set the clipped shadow layer to Multiply. A soft cool hue (violet or deep blue) gives more natural shadows than pure black. Make soft form shadows and hard-edged cast shadows based on a set light source. **2. Guided Hands-On Practice: "3D Sphere / Gem Rendering" (12 min)** Learners follow step by step on a pre-loaded line-art template.	• **Stippling:** small dots; more dots make a darker tone. • **Blending:** smooth, even tone through gradual layering or rubbing. • **Scribbling:** loose, random lines that build density. **Part 2: Texture styles** • **Smooth:** soft, gradual shading without bumps (glass, skin, marble). • **Rough:** uneven surface with varied pressure and short strokes (rock, bark, concrete). • **Furry:** soft surface with flowing, directional strokes (animal fur, plush). **Part 3: Rule of Thirds** • Place a 3 × 3 grid over the canvas. Put the focal point at one of the four intersection points instead of the center.	• Rules during the examination **Reminders:** • Read every question carefully. • Do not talk while taking the test. • Raise your hand if clarification is needed. • Observe honesty at all times. **2. Summative Test (about 30 min)** • Teacher distributes the test papers and answer sheets. • Learners answer independently while the teacher monitors the class. Time is tracked on the whiteboard. • Teacher collects the papers and answer sheets and checks that none are missing. **3. Reflective Exit Slip (5 min)** After passing the papers, learners answer

	into how you think. Recognizing what we don't know yet is the very first step toward mastery." **Check for Understanding and Learner Support** Instructions are given orally and shown on the Smart TV. Teacher checks that learner details are filled in before the test starts. Nervous learners are reminded to take a deep breath and answer what they can. Learners may raise a hand to ask about the general instructions. **Generalization** The RMA MOSY is a "health check" of math skills, not a grade, so honest answers help the teacher support learners better.	shadow color (soft violet or blue). Use the Airbrush for soft shadows and the Dip Pen (Hard) for sharp cast shadows. **Step 4:** Add another clipped layer set to Overlay. Use a textured brush to add a wood, cloth, or noise grain effect. Importing a seamless texture pattern is optional, if time allows. **Step 5:** Add a top layer set to Add (Glow) for rim and glossy highlights. Use a slight Blur on shadow edges if needed. **3. Individual Application and Skill Building (10 min)** • Learners render their own simple object (e.g., an apple, a gem, or a cartoon character) using the same workflow. • Teacher goes around to check progress, fix layer-order or brush-opacity problems, and help learners who are struggling. Learners may ask a seatmate first. **4. Post-Activity Collection and Reflection (5 min)**	**Step 1:** Set the base color on Layer 1 using the Fill Bucket or Dip Pen (Hard). **Step 2:** Add Layer 2, tap Clipping Mask, and set the Blending Mode to Multiply. **Step 3:** Set a fixed light source (e.g., top-left corner). Apply soft shadow gradients on the opposite side using the Airbrush. **Step 4:** Use the Blur or Smudge tool to blend dark values smoothly into mid-tones. **Step 5:** Add Layer 3 (clipped), set it to Add (Glow), and paint rim lights and glossy highlights on the light-facing side. **3. Individual Creative Application (10 min)** • Learners get a slightly more complex line-art worksheet (e.g., a potion bottle, a fruit, or a simple character head).	**2. Guided Practice: "3-Sphere and Composition Warm-Up" (10 min)** • Learners draw a 3 × 3 grid on their canvas or sketchpad and choose one intersection point for the main sphere. • They render three spheres: **Sphere 1**, smooth texture using Blending; **Sphere 2**, rough texture using Cross-hatching or Stippling; **Sphere 3**, furry texture using directional Hatching or Scribbling. **3. Individual Application Activity (10 min)** • Learners compose a quick focal scene (e.g., a creature on a rock, a fruit, or a landscape item). • Requirements: Rule of Thirds placement, at least two shading	the three exit slip questions (see Assessing Learning). **Check for Understanding and Learner Support** Teacher reads the directions aloud and answers questions about the instructions only. Learners who finish early check their answers quietly. **Generalization** The summative test shows how much learners gained from the introductory CSS lessons, and honesty during the test matters.

		• Learners save or export their work as PNG or JPEG. • A few learners share which tool or blending mode made the biggest difference in their work. • **Valuing:** "Digital tools give us endless chances to refine our work, but artistic judgment comes from understanding how light, shadow, and surface interact in the real world. Technology enhances our skills, but the creative vision remains uniquely yours." **Check for Understanding and Learner Support** Teacher pauses after each step, asks a learner to explain what was just done, and checks screens. Learners without a device work in pairs and take turns. Learners who prefer to draw on paper may practice shading with pencil. **Generalization** Layers, clipping masks, and blending modes let us add light, shadow, and texture without ruining the line art.	• **Task:** apply the full workflow: base layer, clipped Multiply layer for shadows, color blending for smooth transitions, then a clipped Add/Glow layer for highlights. • Teacher goes around to give feedback and help with layer order and clipping mask problems. **4. Post-Activity Export and Reflection (5 min)** • Learners export their artwork as PNG or JPEG to the class folder or drive. If there is no internet, they show it on their screen to the teacher. • **Valuing:** "Digital tools give us incredible power to undo and experiment, but understanding light and shadow comes from observing the world around us. Practice builds mastery!"	styles, and at least two texture styles. • Teacher goes around to give feedback on light source consistency, stroke pressure, and composition. **4. Post-Activity Display and Reflection (4 min)** • Learners save, export, or display their sketches for peer review. • **Valuing:** "Artistic expression combines technical control with intentional design. Knowing how light interacts with texture and where to guide the viewer's eye turns simple sketches into meaningful artwork." **5. Formative Assessment (5 min)** Learners answer the 5-item multiple choice test (see Assessing Learning).	

		The tool and blending mode we choose depend on the effect we want.	**Check for Understanding and Learner Support** Line-art files are sent to learners before class (Google Drive or Bluetooth) so no class time is lost. Teacher pauses after each step to check screens. Learners without a device work in pairs, or shade a printed copy of the line art with pencil. **Generalization** A clipped Multiply layer for shadows, smooth color blending, and a clipped Add/Glow layer for highlights make a flat shape look 3D.	**Check for Understanding and Learner Support** Teacher uses the visual guides on the Smart TV and models each technique before learners try it. Learners may draw on paper with pencils and blending stumps or use a digital app. Learners without a device work in pairs. **Generalization** Shading creates light and shadow, texture creates a tactile feel, and the Rule of Thirds balances the composition.	
Learning Resources: *List down the learning resources that will help you reach your objectives. Ensure that they are available and inclusive.* *Include options and alternatives in case of emergencies.*	• Official RMA MOSY learner answer sheet and test booklet • Scratch paper, pencils, and erasers • Smart TV / laptop for the timer and test instructions **Alternative:** If the Smart TV or laptop is	• Smartphones / tablets with Ibis Paint X (or Clip Studio Paint, Procreate, or MediBang Paint) • Stylus pen (optional) or finger drawing • Smart TV / projector and laptop for screen mirroring • Digital reference worksheets and sample line art	• Smart TV / projector and laptop for screen mirroring • Smartphones / tablets with Ibis Paint X • Capacitive stylus pen (or finger drawing) • Sample line-art worksheets (.png files of basic 3D shapes or	• Smart TV / projector and laptop • Smartphones / tablets with a digital art app (e.g., Ibis Paint X), or sketchpads, pencils (2B, 4B, 6B), and blending stumps • Infographics on shading techniques,	• Summative test papers • Answer sheets • Whiteboard and marker (for time tracking) **Alternative:** If the PowerPoint or Smart TV is not available, the teacher reads the

	not available, write the test instructions and time checks on the board and announce the time orally.	**Alternative:** If devices are limited, learners share a device in pairs. If no app can be used, the teacher demonstrates on the projector and learners practice shading with pencil on printed copies of the sample line art.	character line art) shared through Google Drive or Bluetooth **Alternative:** If there is no internet, send the line-art files by Bluetooth ahead of time. If devices are limited, learners work in pairs or shade a printed copy of the line art with pencil.	texture styles, and the Rule of Thirds **Alternative:** If digital devices are not available, learners use sketchpads, pencils, and blending stumps. Printed copies of the infographics can replace the Smart TV display.	directions aloud and writes the reminders on the board.
Opportunities for Integration and Contextualization: *Write down any possibilities to meaningfully connect to another learning area, special topic, local context, or technology. Write N/A if none.*	• **English / Language Literacy:** reading comprehension in dissecting word problems. • **Values Education:** integrity, resilience, self-honesty, and managing assessment pressure. • **ICT / Data Analytics:** recording assessment data in automated scoresheets for proficiency level analysis.	• **Arts & Design:** principles of contrast, value scale, light source direction, and color theory. • **Values Education:** patience and persistence in learning a new digital interface; academic integrity in creating original digital content. • **English / Language Literacy:** communicating artistic choices and technical steps during peer discussions.	• **Arts & Design:** value scale, light source dynamics, ambient occlusion, and warm/cool color harmonies. • **Physics / Optics:** behavior of light, surface reflection, angle of incidence, and shadow casting. • **Values Education / Character Building:** patience in mastering software interfaces, persistence through technical errors, and respect for original digital creations.	• **Arts & Design:** value scale, surface quality, focal point, and visual balance. • **Mathematics / Geometry:** proportional division, grid alignment (3 × 3 grid ratio), and spatial distribution. • **Values Education:** patience and persistence in mastering stroke techniques; appreciative reflection on creative growth.	• **Values Education:** honesty and integrity during examinations. • **English / Literacy:** comprehension of technical terminology and following complex instructions.

Assessing Learning	Assessments reveal what learners have gained and what they still need help with. These are helpful in providing you with information to guide your future instruction throughout the entire session.				
Formative Assessment: *Create a task, activity or questions to assess learning and provide feedback every now and then. Include ways for learners to ask for guidance or support throughout each session.* *Remember to provide appropriate accommodation so all learners can demonstrate their understanding (e.g. varied response formats, small group options, visual or auditory supports).*	• **Main tool:** Official DepEd Rapid Mathematics Assessment (MOSY) instrument. • **After the test (data profiling):** Teacher enters the learners' scores in the official DepEd Automated Excel Scoresheet to group learners by proficiency level. • **Support and accommodations:** visual timer, clear oral instructions, and clarification of general instructions on request (no hints).	**In-Process Performance Check (rubric-based observation)** • **Correct Layering & Tool Usage (40%):** separate layers for base colors, clipped shadow layers (Multiply), and highlights (Add/Glow) are used properly. • **Shading & Value Technique (30%):** the light source, shadows, and smooth gradients or hard edges are shown effectively. • **Texture & Enhancement (20%):** digital textures and visual adjustments are	**In-Process Performance Check (rubric-based observation of the final artwork)** • **Tool & Layer Selection (40%):** the base layer, clipped layers, and blending modes (Multiply for shadows, Add/Glow for highlights) are used correctly. • **Shading & Color Blending (30%):** fixed light source, soft and cast shadows, and smooth transitions using the Airbrush, Blur, or Smudge. • **Highlights & Depth (20%):** the object looks	**5-Item Multiple Choice Test** **Directions:** Choose the letter of the correct answer. 1. Which shading technique uses short, parallel lines in one direction to create light and dark values? A. Stippling B. Hatching C. Blending D. Scribbling 2. Why is the Rule of Thirds preferred over dead-center placement? A. It reduces the size of the canvas to fit smaller details. B. It makes all objects look completely smooth.	**Reflective Exit Slip** After passing the papers, learners answer three questions on a small piece of paper: 1. Which topic did I find easiest? 2. Which question made me think the hardest? 3. How can I improve my study habits for the next module? **Main evidence of learning:** the summative test score. Learners may raise a hand if they need the instructions clarified.

		used creatively and appropriately. • **Focus & File Management (10%):** work is saved or exported properly and finished on time. **Other checks:** quick check questions in the pre-lesson and oral questions during guided practice. Learners may ask the teacher or a seatmate for help at any point. **Accommodation:** learners who cannot use a device may show the same steps on paper with pencil shading.	3D, with clear rim light or glossy highlights. • **Focus & File Management (10%):** exported as PNG or JPEG and finished on time. **Tool choice check:** while going around, the teacher asks: "Which tool or layer feature kept the shadow inside the shape? Which one gave the smooth transition? Which one made the highlight? Why?" Learners may ask the teacher or a seatmate for help at any point.	C. It positions key subjects near grid intersections to create a more dynamic and visual balance. D. It eliminates the need to use shadows and texture rendering. 3. An artist wants to draw realistic tree bark and a rough concrete wall. Which stroke pressure and texture style should be used? A. Even, gradual shading without bumps (smooth) B. Flowing, directional long strokes (furry) C. Uneven surfaces with short strokes and varied pressure (rough) D. Soft, blended circles with no visible strokes (glass-like) 4. Artwork X: a sphere shaded with dots packed densely on the lower left, tapering to widely spaced dots at the top right. Artwork Y: a sphere shaded	

				with crisscrossing diagonal lines on the shadowed side. Which statement is correct? A. X uses Hatching, Y uses Blending. B. X uses Stippling, Y uses Cross-hatching. C. X uses Scribbling, Y uses Stippling. D. X uses Blending, Y uses Hatching. 5. A landscape sketch has the lighthouse at the lower-left intersection of a 3 × 3 grid. Its dark side uses dense cross-hatching and its sunny side uses faint parallel lines. How should it be evaluated? A. Ineffective, because the main subject should always be in the exact center. B. Incomplete, because cross-hatching cannot be used with parallel hatching.	

				C. Effective, because it follows the Rule of Thirds and the shading shows clear value contrast and light direction. D. Poor, because the grid lines must remain visible in the final artwork. **Answer Key:** 1. B 2. C 3. C 4. B 5. C **Other checks:** teacher observation during practice (light source consistency, stroke pressure, composition alignment). Learners may ask for help at any point and may answer the practice task on paper or digitally.	

Ways Forward

Meaningful learning can also happen beyond the classroom – for both the learners and the teacher. Pause and reflect on what happened today.

Extended Learning Opportunities: *Suggest other learning experiences outside the classroom/class hours that learners may want to access to reinforce what they have learned, to spark their curiosities further, or that may provide them support in their areas of difficulty.*	• **Math Confidence Journal:** at home, learners write two math topics they felt confident about during the assessment and two topics they want to improve before the end of the term. • **Intervention:** the scoresheet results are used to decide which math topics need more focus and support in the coming months.	• **Digital Art Portfolio Challenge:** learners apply the shading and texturing techniques to a full digital artwork (e.g., a landscape, character design, or product poster) at home or during laboratory vacant hours. • **Online resources:** official Ibis Paint YouTube tutorials on Custom Texture Import and Advanced Color Adjustment Filters. • **Intervention:** learners who did not finish may complete their artwork during laboratory vacant hours. Learners who finished early may add an Overlay texture layer.	• **Digital Art Portfolio Challenge:** learners use clipping masks, color blending, and Add/Glow highlights on a full digital artwork (e.g., a landscape, character design, or product poster) at home or during laboratory vacant hours. • **Online resources:** official Ibis Paint YouTube tutorials on Custom Texture Import and Advanced Color Adjustment Filters. • **Intervention:** learners who had trouble with clipping masks or layer order may redo the 3D sphere template during laboratory vacant hours, and the teacher checks it.	• **Art Journal Challenge:** create a one-page sketchbook study that applies the Rule of Thirds to a real-life object found at home, practicing rough and furry texture shading. • **Digital practice:** try digital brushes (e.g., textured airbrushes, stipple brushes, mesh grids) in Ibis Paint X or an equivalent app. • **Intervention:** learners who missed several items on the 5-item test review the shading and texture infographics and answer the missed items again.	• **Research task:** look up the components inside the system unit to prepare for the next topic. • **Intervention:** learners who found the test difficult list the topics they want to review on their exit slip, and the teacher uses these for a short review.
Reflections:					

Think about what you need to change for the next session based on what happened today. Is there something the learners are interested in exploring? *Are there some things you would like to share with your co-teachers, parents, or school leaders about your classroom experience? What would you like your instructional coach to help you with?* *Reflections may be written in brief notes, bullets, or annotations.*
